

Microsoft SQL Server™ 2005

Aligned to Deliver the Next Generation of Integrated Business Solutions

Microsoft Dynamics™ is a line of financial, customer relationship and supply chain management solutions that help organizations work more effectively. Delivered through a network of channel partners providing specialized services, these integrated, adaptable business solutions work like and with familiar Microsoft software to streamline processes across an entire business.

Microsoft Dynamics NAV, the next release of Microsoft Business Solutions-Navision, offers a Microsoft SQL Server option for Microsoft Dynamics NAV to help companies turn business data into smart decisions. As part of the Microsoft Windows™ Server System, Microsoft SQL Server provides a comprehensive, integrated and reliable data management and analysis platform for growing companies.

Key Benefits:

- Utilize the latest, industry-leading database technology from Microsoft to gain greater insight from business data
- Improve operational efficiency with easier integration to third-party products and applications and other Microsoft products
- Empower your employees and IT department with comprehensive and reliable data management

Gain Greater Insight and Make Better Decisions

As an option for Microsoft Dynamics NAV, Microsoft® SQL Server 2005™ makes it easier for your employees to access, extract and analyze business data and information to improve business decisions.

Employees can access and work concurrently with accurate data and configure OLAP cubes easily using a set of forms within Microsoft Navision. You and your employees will be able to spot trends, make comparisons and make informed decisions based on accurate data.

Streamline Your Business Operations and Grow

Your Microsoft Dynamics NAV solution is tightly integrated with the Microsoft SQL Server database and Microsoft Windows. And, because Microsoft SQL 2005 is an industry standard database, it can help you reduce the costs of integrating to other systems and applications. Microsoft SQL Server integrates easily with third-party products and applications and other Microsoft products – making it easier to adapt your solution as your business grows.

With extended OLAP functionality it is possible to build and analyze data warehouses of any size. The information you need to attract more customers, expand your marketing

strategies, and form successful business partnerships is easily stored and accessible to your organization.

Empower Your Employees to Manage Data

Microsoft SQL 2005 helps empower your IT department to manage your company's data more efficiently. Reliable automation of recurring administrative tasks is a key benefit of Microsoft SQL Server and is secured through enhanced failover clustering. Automatic data file size management and automatic memory management helps save your business time and money.

Backing up and restoring data can be automated as jobs, and these can run without any disruption to your work. Alerts can be programmed to monitor backup procedures and the database, warning the system administrator when problems arise.

Jobs and alerts are programmed using wizards. You can also copy databases using wizards.

Ask Your Partner

To learn more about Microsoft Dynamics NAV, contact your local Microsoft Certified Partner. They have the expertise necessary to meet your specific business needs.
