

MICROSOFT BUSINESS SOLUTIONS-NAVISION

USER EXPERIENCE

Microsoft® Business Solutions-Navision® 4.0 delivers a user experience that helps both employees and systems administrators be more efficient and productive, with less effort.

Key Benefits:

- Employees can personalize the Microsoft Navision main menu to suit the way they work.
- Administrators can design and configure the Microsoft Navision main menu to help employees do their job easier and faster.

Key Features:

- Consistent user experience for employees and administrators
- Intuitive, effortless user operations
- Flexible design mode for administrators

A Familiar User Interface to Increase Productivity

The Microsoft Navision Navigation Pane has the familiar look and feel of the Navigation Pane in Microsoft® Office Outlook® 2003. Its main menu content has been structured around departmental areas to reflect employees' roles and tasks. Each of these areas has its own menu. This makes it easy for employees to find the functionality they need, quickly.

The Navigation Pane displays one menu at a time. Menu buttons at the bottom of the pane enable users to switch from one menu to another. The menus are organized in intuitive, logical tree structures, just like the folder structure in Windows Explorer. Menus contain menu items for the windows, reports, and batch jobs that users have access to. To make it easier to navigate within a menu, related menu items are gathered in menu groups.

Efficient, Seamless Working Environment for Users

The Microsoft Navision user experience allows your employees to focus on performing their business tasks. They can personalize menus to access common tasks more directly, minimize distraction from unneeded functions, and achieve desired results sooner. For example, your employees can:

- Create shortcuts to the menu items that they use most frequently, and thereby reduce the time spent navigating through the menus. Shortcuts can also launch external applications, files and Web pages.
- Hide and show menu items at their discretion, reducing screen clutter.
- Track which menu an active window belongs to.
- Refresh the menus to see the changes that the systems administrator has made. Alternatively, these updated menus can be displayed the next time an employee logs on.

Design and Configuration of Menus to Improve Organizational Effectiveness

Systems administrators can use the Microsoft Navigation Pane Designer to configure the Microsoft Navision main menu to suit the way their organizations operate. They can also assign users to menus so that employees only see the menus that are relevant to their roles.

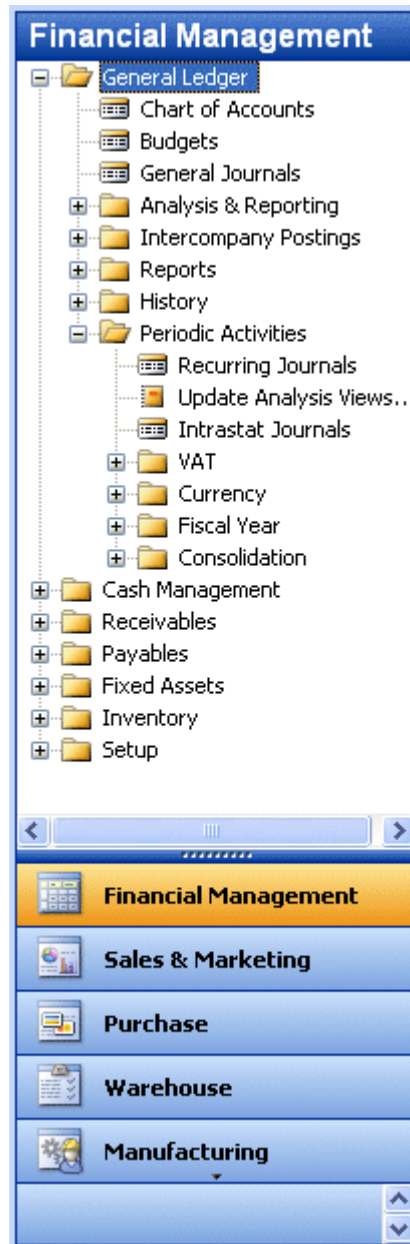

In addition to being able to perform design and configuration tasks, systems administrators benefit from the enhanced Microsoft Navision user experience in the same ways as employees do. They, too, can personalize their own menus, create shortcuts, and simplify their work environment.

About Microsoft Business Solutions

Microsoft Business Solutions, a division of Microsoft, offers a wide range of integrated, end-to-end business applications and services designed to help small, midmarket, and corporate businesses become more connected with customers, employees, partners, and suppliers. Microsoft Business Solutions' applications optimize strategic business processes across financial management, analytics, human resources management, project management, customer relationship management, field service management, supply chain management, e-commerce, manufacturing, and retail management. The applications are designed to provide insight to help customers achieve business success. More information about Microsoft Business Solutions can be found at www.microsoft.com/BusinessSolutions.
